VOLTAGE MONITORING RELAYS

- For three-phase systems with or without neutral and single-phase systems
- Minimum and maximum AC voltage
- Phase loss and incorrect phase sequence
- Asymmetry
- Minimum and maximum frequency.

Pages 18-8 and 9

CURRENT MONITORING RELAYS

- For single and three-phase systems
- Maximum AC/DC current
- Minimum or maximum AC/DC current
- Minimum and maximum AC/DC current.

PUMP PROTECTION RELAYS

- For single and three-phase systems
- Minimum $\cos\phi$ for dry running protection
- Maximum AC current
- Phase loss and incorrect phase sequence.

Page 18-11

PHASE SHIFT MONITORING RELAYS

- For single and three-phase systems
- Minimum $\cos\phi$
- Maximum $\cos\phi$.

Page 18-11

FREQUENCY MONITORING RELAYS

- For single and three-phase systems
- Minimum frequency
- Maximum frequency.

INTERFACE PROTECTION SYSTEM UNITS

- Compliant with Italian standard CEI 0-21, for low voltage
- Compliant with Italian standard CEI 0-16, for medium voltage.

- Modular version for switchgear panels, also suitable for rear mounting plate fixing
- Minimum and maximum voltage monitoring relays for single and three-phase systems, with or without neutral
- Voltage asymmetry, phase sequence and phase loss control relays
- Minimum and maximum current monitoring relays
- Frequency monitoring relays
- Interface protection system units compliant with Italian standards CEI 0-21 and CEI 0-16.

For three-phase systems, without neutral

PMV10 A440

Order code	Rated voltage to control Ue (phase to phase)	Qty per pkg	Wt
	[V] 50/60Hz	n°	[kg]

Three-phase system, without neutral. Phase loss and incorrect phase sequence. Instantaneous trip. 1 module housing.

PMV10 A440	208...480VAC	1	0.050
PMV20 A240	100...240VAC	1	0.120
PMV20 A575	208...575VAC	1	0.120
PMV20 A600	380...600VAC	1	0.120

2 modules housing.

General characteristics

- Voltage monitoring relay, self powered, for phase loss and incorrect phase sequence
- Phase loss detection if one of the voltages is <70% rated value
- Phase loss tripping time: 60ms
- 1 relay output with 1 changeover contact (SPDT)
- Modular DIN 43880 housing: 1 module for PMV10; 2 module for PMV20
- IEC degree of protection: IP40 on front (only when placed in IP40 enclosure or control board); IP20 at terminals.

Certifications and compliance

Certifications obtained: EAC; UL Listed, for USA and Canada (cULus - File E93601) as Auxiliary Devices. Compliant with standards: IEC/EN 60255-5, IEC/EN 61000-6-2, IEC/EN 61000-6-3, UL 508, CSA C22.2 n° 14.

Operational diagram

PMV30 A575	380...575VAC	1	0.130
PMV30 A600	600VAC	1	0.130

General characteristics

- Voltage monitoring relay, self powered, for minimum voltage, phase loss and incorrect phase sequence
- Configurable rated voltage (Ue):
 - PMV30 A240: 208-220-230-240VAC
 - PMV30 A575: 380-400-415-440-460-480-525-575VAC
- Excellent tripping accuracy
- TRMS measurements (True Root Mean Square)
- Control of phase-to-phase voltages
- Phase loss detection if one of the voltages is <70% rated value
- Phase loss tripping time: 60ms
- 1 relay output with 1 changeover contact (SPDT)
- Modular DIN 43880 housing, 2 module
- IEC degree of protection: IP40 on front (only when placed in IP40 enclosure or control board); IP20 at terminals.

ADJUSTMENTS

- "V min" Minimum voltage tripping threshold 80...95% Ue
- "Delay" Tripping time 0.1...20s
- "Reset delay" Resetting time 0.1...20s.

IEC/EN 61850 protocol

The EXP10 18 module will be made available only when the competent authorities have established the exact terms of the supervision and control of the specific commands (currently under study as specified in the Italian CEI 0-21 standard).

General characteristics

PMVF 20 interface protection system (SPI) unit has been developed according to the Italian CEI 0-21 standard prescriptions. It is used when a local generating system is connected in parallel with the low-voltage electric utility. The controls refer to limits of voltage and frequency monitoring.

In the case when either the voltage or the frequency are out of admissible limits, the SPI must step in by de-energising a relay output so that the interface device (DDI) trips.

PMVF 20 is equipped with 4 inputs having the following functions:

- DDI status feedback
- External signal for frequency selection (communication network malfunction)
- Local control for frequency selection
- Remote tripping (forced DDI opening independent of voltage and frequency values).

Also, there are two relay outputs for:

- DDI opening and closing
- Standby device opening (programmable: retentive normally energised, retentive normally de-energised or adjustable pulse).

The standby device control is compulsory in installations with more than 20kW and consists of a signal, with a 0.5s delay respect to the DDI opening command, transmitted only if the DDI fails and does not complete the disconnection.

By fitting the EXP10 03 expansion module on the PMVF 20, the following functions can be configured as:

- Programmable alarm
- Autonomous signalling in case of phase power unbalance (LSP), only if three CTs are also installed.

Operational characteristics

- Auxiliary voltage:
 - PMVF 20: 100...400VAC/110...250VDC
 - PMVF 20 D048: 12...48VDC
- Voltage inputs:
 - 400VAC (three-phase connection)
 - 230VAC (single-phase connection)
- Relay outputs 5A 250VAC AC1 / 5A 30VDC
- 4 digital inputs
- Current inputs (optional): Use via CTs with selectable /5A or /1A secondary
- Support of EXP series communications ports (USB, RS232, RS485, Ethernet) see section 28
- Parameter configuration and remote control (only with communication expansion module) with software **Synergy** and **Xpress**
- Housing: Flush mount 96x96mm/3.78x3.78"
- IEC degree of protection: IP65 on front; IP20 on terminals
- **Predisposed for IEC/EN 61850 signal supervision using expansion or external module.**

Reference standards

Compliant with standards: Italian CEI 0-21, IEC/EN 60255-5, IEC/EN 61010-1, IEC/EN 61000-6-2, IEC/EN 61000-6-3.

Note for Italian CEI 0-21 standard:

According to standard prescriptions, once the installation is completed, the interface protection must be tested by the installer using a relay test box which controls the trip thresholds and timing.

Operational diagram

EXP10...

General characteristics

PMVF 30 interface protection system (PI) unit has been developed according to the Italian CEI 0-16 standard prescriptions. It is used when a local generating system is connected in parallel with the medium-voltage utility distribution grid. The controls refer to limits of voltage and frequency monitoring.

In the case when either the voltage or the frequency are out of admissible limits, the SPI must step in by de-energising a relay output so that the interface device (DDI) trips.

PMVF 30 is equipped with inputs having the following functions:

- DDI status feedback
- Interface protection system exclusion
- Local control
- Remote tripping (forced DDI opening, independent of voltage and frequency values).

In addition, there are two relay outputs to configure as:

- DDI opening
- Programmable (either as factory default for standby device opening or to set up as auto reclosing if the DDI is an automatic circuit breaker).

Standby device opening

In installations with more than 400kW, the standard specifies there must be a command signal, that releases another standby device, given within 1 second whenever the DDI opening fails or malfunctions.

Automatic DDI reclosing

Whenever an automatic circuit breaker is used as the DDI, the PMVF 30 is capable of controlling both the opening (according to the installation conditions indicated in the Italian CEI 0-16 standard) and the auto reclosing. The auto reclosing function includes defining the number of attempts and the time interval between an attempt and the following one as well as generating an alarm if the closing operation does not take place. This function can be carried out through a programmable output of the PMVF 30 (unless it is already used for the standby device operation) or by installing an EXP10 03 expansion module.

Operational characteristics

- Auxiliary voltage:
 - PMVF 30: 100...400VAC/110...250VDC
 - PMVF 30 D048: 12...48VDC
- Voltage inputs (connection via VTs in MV or directly in LV end):
 - Primary: 400...150,000V
 - Secondary: 50...500V (for voltage/frequency); 50...150V (for residual voltage measurement)
- Relay outputs 5A 250VAC AC1 / 5A 30VDC
- 4 digital inputs
- 3 current inputs (for optional measuring): Use via CTs with selectable /5A or /1A secondary
- Support of EXP series communications ports (USB, RS232, RS485, Ethernet); see section 28
- Housing: Flush mount 96x96mm/3.78x3.78"
- Parameter configuration and remote control (only with communication expansion module) with software **Synergy** and **Xpress**

Aerial connector

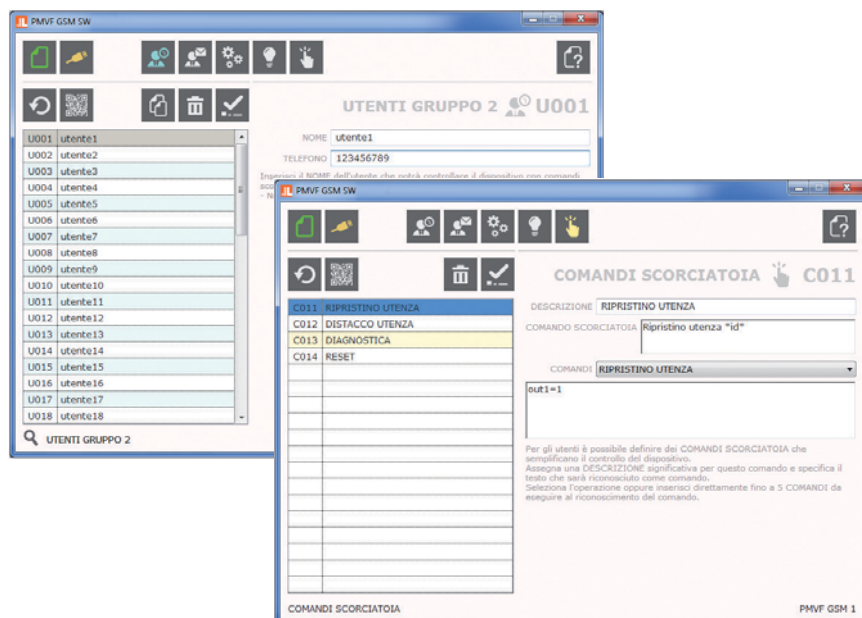

Software

To configure the PMVF GSM 1 modem (using the RJ45-USB programming cable included), the PMVF GSM SW software must be used. This can be downloaded freely from the www.LovatoElectric.com website.

The software allows you to set:

- the users enabled to exchange messages with the modem
- the active customer code (POD)
- the functions assigned to the digital outputs and input
- the texts of the SMS associated with the commands.

Configuration is also possible off-line, creating a file to transfer to the modem at another time.

Application requirements

The Italian CEI 0-16 Standard, in paragraph 8.8.6.5 and annex M, prescribes that electricity production systems powered by wind or the sun through photovoltaics with a power equal to or greater than 100kW, connected to or to be connected to medium-voltage networks, have a GSM modem.

The modem must be able to receive the signals sent by the electricity distributor for the management of generation disconnection.

Functional characteristics

- Connection to the GSM network for sending and receiving SMS messages
- Programmable message texts
- Control output controlled by SMS for sending of intertripping signal to the protection interface
- Digital input for receiving the status of the Interface Device (DDI) and sending of successful DDI opening and closing SMSs
- POD management (active user code)
- Management of the list of caller IDs (CLI) up to 50 callers enabled
- Detection of mobile network coverage
- Full compatibility with medium-voltage PI LOVATO Electric PMVF 30: no software/hardware updates or programming required
- Compatibility with third-party PIs where the remote disconnection signal is transmitted via digital input (dry contact). For additional information contact our Customer Service office Tel. + 39 035 4282422; E-mail: service@LovatoElectric.com.
